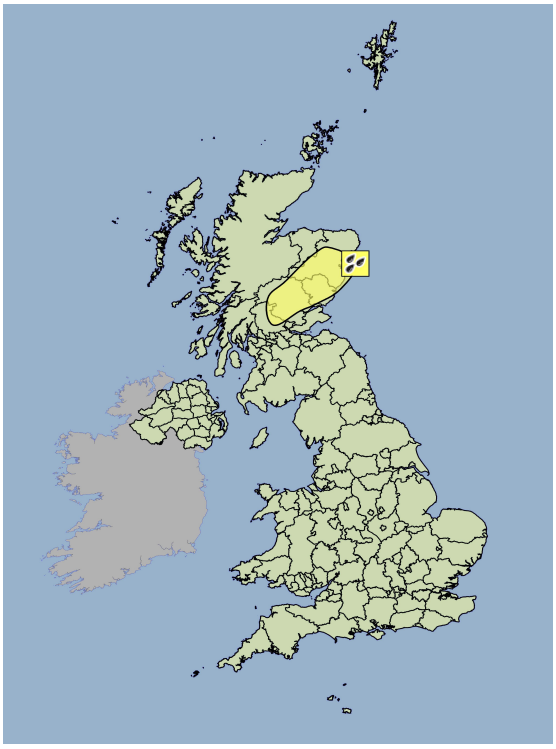
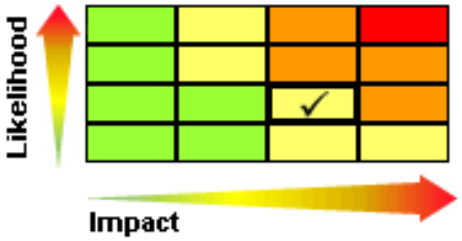
National Severe Weather Warning Service





Chief Forecasters Assessment
An active frontal system is expected to move northeastwards into Scotland on Thursday and become slow-moving. Although there remains uncertainty in the precise details and timing of this system, there is concern that areas of eastern Scotland that have experienced exceptionally wet weather may have further heavy rain. Please watch out for updates to this warning which will be updated in the coming days as new information becomes available.

The Met Office have issued a **Yellow Alert** of **Rain**

Valid from **00:05 on Thu, 07th Jan 2016** until **23:50 on Thu, 07th Jan 2016**

Further heavy and possibly prolonged rain is expected on Thursday across parts of eastern Scotland. Rainfall totals of 20-40 mm are possible quite widely with perhaps over 60 mm on high ground. Given the earlier exceptionally wet weather please be aware of a renewed risk of flooding and disruption to transport. In addition, further snow is likely to affect higher routes. It is possible that the rain may continue into the first part of Friday.

This is an update to the warning to increase the risk of medium impacts from very low to low.
